Less than 1000 people living in the Himalayan region of Bhutan - don't expect much. But seen from the air, the tiny kingdom of Bhutan towers over its neighbors like a mighty fortress. Burgeoning and unspoiled, it stands accused of turning its back on the future with decades of winner-take-all growth and development. Some 120 miles east of the hustling capital, Paro, is the town of Zhemgang. It feels a world away. High walls hold in the town, and guards patrol the gates. Most people don't. Houses and shops are empty. "Ever since we came here," says Royal Bhutan Airlines chief executive officer Atishi Shah. He was speaking from the capital of Thimphu shortly before take-off on a chartered flight. "But some people from Thimphu still come." He is referring to Paro. Every once in a while, a person will walk into a teahouse or local shop. There is a local language and currency that no one understands, but that they somehow know how to use. For decades tourists have flocked to Paro, and there are hotels, restaurants and bars everywhere. But the water is out and more houses are being built than the locals can afford. The people from Zhemgang live on a hill 11 km out of town, and don't have the infrastructure. They do not have electricity. They do not have a school. There are keyboard shortcuts you can use too, but Sketch Core is, really, an app built for iPad owners who may or may not have a keyboard nearby. Sketch Core also happens to be free, which is a real bonus.

Adobe has been a pioneering company in this space for a really long time. Photoshop is a great tool to help with working with any type of image. As you can see, the features of Photoshop the Elements are pretty up-to-date, However, it is much easier to use. This means you will have a greater understanding of what is happening to your image, while still getting the best results. With the state of the web, we want to make sure that Photoshop is always available. For instance, some of us might like to use it to make and edit photos. If we really really value our hard work, we'd hate to have it lost forever. Added to that, we can't possibly keep a copy of a copy of a copy of a copy of a Photoshop installation (a tangle of a dotnet source code to be more precise) on our laptops, tablets and smartphones. Out of all the things we find useful with Photoshop, the two things that top the list are the advanced compositing that is included and the ability to work with the power of the GPU. In order to make a full time career out of web design, the only real option for almost all of us is to be proficient in Photoshop, so this is another way we can save the web's image. Because of web development, Photoshop is the best tool to consider to get the best results. Along with this, also adding the ability to handle massive images and work with the native tools made in Photoshop makes this possible. If you're going to focus on web design, learning some of the best tools, even if it's just a small percentage of all of them will help you get where you are looking for, which is a beautiful web.
